Short Programme

Centro Municipal da Juventude, Vila do Conde [Directions]

DAY 1: 19th December 2024

11:00: Registration and Poster

9:00: Plenary Talk | Margarida Moreira

9:40: Talks 15 to 20

10:52: Coffee Break & Posters

11:22: Talks 21 to 26

12:35: Group Photo

12:40: Lunch Break

13:30: Opening Ceremony

placement

14:00: Plenary Talk | José Cerca

14:40: Talks 1 to 7

16:04: Coffee Break & Posters

16:34: Plenary Talk | Allowen Evin

17:14: Talks 8 to 14

18:38: Homage to Prof. Amorim

19:15: End of first day

14:00: Plenary Talk | Rebecca Mead

14:40: Talks 27 to 34

16:16: Coffee Break

16:45: Poster Session

17:45: Closing Ceremony

18:00: General Assembly of APBE

DAY 2: 20th December 2024

Detailed Programme

Centro Municipal da Juventude, Vila do Conde [Directions]

DAY 1: 19th December 2024

11:00: Registration and Poster placement

13:30: Opening Ceremony

- 14:00: Plenary Talk | José Cerca | Adaptive radiation on Oceanic Islands; Tales of ecological niches and ecological generalists)
- 14:40: Talk 1 | Bárbara Freitas | Does song act as a behavioural barrier to gene flow? Evidence from divergent populations of La Palma's Canary Islands Chaffinch
- 14:52: Talk 2 | Lara Almeida | Evolutionary history of the Mus musculus in Cabo Verde
- 15:04: Talk 3 | Maria Romeiras | Patterns of diversification and colonization in Macaronesian Apiaceae lineages
- 15:16: Talk 4 | Estêvão Faustino | Hybridization between currently allopatric species at the root of speciation? The case of Iberian chubs (Genus Squalius)
- 15:28: Talk 5 | Tristan Bertrand | Comparative Population Genomics Illuminates Species Boundaries and Symbiotic Disruption in *Eunicella Octocorals*
- 15:40: Talk 6 | Salomé Barreto | Ecological differentiation influences the evolution of prezygotic isolation in spider-mite species
- 15:52: Talk 7 | Ivo Chelo | Can reproductive isolation arise from epistatic deleterious and compensatory mutations in small populations: an experimental test with *C. elegans*
- 16:04: Coffee Break & Posters
- 16:34: Plenary Talk | Allowen Evin | 8,000 years of domestic plants and animals evolution: understanding local adaptation under socio-economic and climatic fluctuations
- 17:14: Talk 8 | Pedro Sousa | Understanding hybridization between alpine hares in a context of climate-induced range shifts
- 17:26: Talk 9 | Carlos Yadro | Population structure and environmental adaptation in two honey bee subspecies from southern European refugia: *A. M. ligustica* and *A. M. iberiensis*
- 17:38: Talk 10 | José Costa | Genetic divergence and local adaptations in endemic hares: Insights from the Italian and Broom hares

- 17:50: Talk 11 | Dora Henriques | population structure and conservation status of middle eastern honey bee subspecies
- 18:02: Talk 12 | Matthew Moreira | Distribution of intraspecific diversity across species ranges: insights from herptiles in six global regions
- 18:14: Talk 13 | Susana Almeida | Phylo-transcriptomics of the giant kelp *Macrocystis* pyrifera reveals multiple trans-oceanic dispersal events across the Southern Ocean
- 18:26: Talk 14 | Maria Carolina Matos | FCRL ancestry: can we truly find parallels between placental mammals, marsupials and monotremes?
- 18:38: Homage to Prof. Amorim | Sandra Martins | New paralogs of ataxin-3 identified in primates and the constraint evolution of *ATXN3L* retrocopy
- 19:00: Homage to Prof. Amorim | Maria João Prata | António Amorim: a singular professor
- 19:15: End of first day

DAY 2: 20 December 2024

- 9:00: Plenary Talk | Margarida Cardoso Moreira | Origins of cells and organs the view from the placenta
- 9:40: Talk 15 | Inês Miranda | The origin and maintenance of adaptive seasonal camouflage in the least weasel
- 9:52: Talk 16 | Diogo Berjano | How do biochemical and environmental factors shape the fitness landscape of synonymous mutations on Hsp90?
- 10:04: Talk 17 | Joel Laia | Monoterpene synthase ligand preference: a case of both divergent and convergent evolution in Menthinae, Lamiaceae
- 10:16: Talk 18 | Beatriz Sousa | Evolutionary and functional study of the thyroid Sodium/Iodide Symporter homologs in plants
- 10:28: Talk 19 | Ana Serra Silva | Very Weak Support for Deuterostome Monophyly is Boosted by Long Branch Attraction Artefacts
- 10:40: Talk 20 | Bruno Nevado | Phylogenomics of Lupinus reveals strong geographic structuring and multiple instances of phenotypic convergent evolution
- 10:52: Coffee Break & Poster Session
- 11:22: Talk 21 | Sandra Estela Moreno Fernández | Lineage diversification of Acrocephalidae family (Reed Warblers) and its relationship with migratory behaviour and islands colonisation
- 11:34: Talk 22 | Carolina Peralta | Characterization of polymorphic inversions in locally adapted populations of *Clunio marinus*

- 11:46: Talk 23 | Carla Gonçalves | A turbulent evolutionary history involving massive gene gains and losses has shaped the genome and metabolism of a fungal lineage
- 11:58: Talk 24 | Mario Torralba Sáez | A shark's eye view on genome size evolution: phylogenetic patterns, molecular causes, and phenotypic consequences
- 12:10: Talk 25 | Daniel García Souto | Phenotypic and genetic differentiation between two chromosomal taxa of the gastropod Nucella lapillus at Galician rocky shores (NW Spain)
- 12:22: Talk 26 | Catarina Branco | Identifying the sex chromosomes of Laurus azorica

12:35: Group Photo

12:40: Lunch Break

14:00: Plenary Talk | Rebecca Mead | The Sandwalk: Time for Thinking about Evolution Education

- 14:40: Talk 27 | Xana Sá-Pinto | Stronger together: a revision of stakeholder impact of NEDE.APBE's 12 years of education and outreach in evolution
- 14:52: Talk 28 | Javier Oñate Casado | When individuality obscures geographic song variation: a comparison of two passerine sister species with different migratory strategies
- 15:04: Talk 29 | Gabriel Munar Delgado | Popular birds live longer: The association of social bonds and survival in a social bird
- 15:16: Talk 30 | Miguel Cruz | A genetic trade-off between intrinsic growth and sensitivity to competition, but not with reproductive interference, in spider mites
- 15:28: Talk 31 | Clara Pidner | Is the devil in the details? Investigating the role of the body spot in male-female interactions of the fish Poecilia vivipara's
- 15:40: Talk 32 | Rita Melo-Miranda | The role of exercise in mitigating inflammaging and gut dysbiosis
- 15:52: Talk 33 | Ana Sousa | Aging drives gut bacteria toward pathoadaptation
- 16:04: Talk 34 | Lekshimi B Sreelatha | Environmental drivers of colouration in Lusitanian wall lizards: Testing key ecogeographical hypotheses

16:16: Coffee Break

16:45: Poster Session

17:45: Closing Ceremony

18:00: General Assembly of APBE

Talk 11

Population structure and conservation status of middle eastern honey bee subspecies

Population genetics; Apis mellifera; whole-genome sequencing; Middle Eastern

The honey bee Apis mellifera evolved into at least 31 subspecies in its native range in the Middle East, Africa, and Europe. The Middle Eastern subspecies have been understudied, hindering a comprehensive understanding of honey bee evolutionary history and the conservation status of native diversity patterns. Since ancient times, humans have assisted gene flow within each subspecies native range. However, in the last decades, globalization and intensification of queen trading have facilitated the contact between previously allopatric subspecies (especially involving the beekeeper-favoured Eastern European A. m. ligustica and A. m. carnica from Eastern Europe), leading to introgressive hybridization. This poses a problem as it may lead to the breakdown of gene complexes adapted to local environmental conditions, particularly to the dry and hot summers of the Middle East. In this study, we used whole-genome sequence data to investigate the genetic integrity and population structure of five Middle Eastern subspecies across a broad geographical range: Turkey (A. m. anatoliaca, N=97; A. m. caucasia, N=75; A. m. meda, N=18), Jordan and Lebanon (A. m. syriaca, N=238 and N=29), Iran (A. m. meda, N=75), Oman, and the UAE (A. m. jemenitica, N=13 and N=10). Our findings reveal concerning conservation status for many populations and subspecies. In Turkey, three distinct subspecies have traditionally been recognized: A. m. anatoliaca, A. m. caucasia, and A. m. syriaca. However, our analysis indicates that the populations previously assumed to be A. m. syriaca are in fact A. m. meda. Moreover, while three subspecies still exist in Turkey, populations are highly admixed. In Jordan and Lebanon, where A. m. syriaca is native, we observed variable levels of introgression from A. m. ligustica. Similarly, in Iran, where A. m. meda is found, extensive introgression was detected, primarily involving A. m. ligustica and A. m. caucasia. In the UAE, two main groups were identified: the first containing hybrids of A. m. jemenitica, A. m. lamarckii, and A. m. liqustica, while the second group predominantly consisted of hybrids of A. m. lamarckii and A. m. ligustica. Oman was the only location within the native range of A. m. jemenitica where all samples were classified as pure. This study highlights widespread hybridization across the Middle East and underscores the urgent need for targeted conservation efforts to preserve the genetic diversity of Middle Eastern A. mellifera subspecies.
